

Summary

Full-stack software engineer with ten years of experience developing accessible user interfaces and web applications for companies in the insurance, finance, advertising and retail sectors.

Experience

Software Engineer 2, The Home Depot - NOV 2021 - PRESENT

- Migrating 40+ React components with a team of developers from Webpack to Vite. Migrating tests from Jest to Vitest. Vite and Vitest speed up component dev cycles by 40%. Working with stakeholders to ensure there are no changes to existing functionality.
- Migrated APIs within pricing team's largest component from REST to GraphQL, to move towards a unified API surface across all of home depot.
- Added New Relic logging to marketing components that displays promotions for users on the homepage of homedepot.com, to better track conversion of potential customers.
- Refactored portions of the core product display component used on large parts of homedepot.com.

Fullstack Software Engineer, Airtank - MAY 2021 - AUGUST 2021

- Built marketing websites for various clients using the Shopify platform and a custom ecommerce platform developed by Airtank.
- Interfaced with project managers and other team members to resolve technical questions & accessibility concerns for projects being built.

Frontend Software Engineer, Chase Bank - JUNE 2020 - MAY 2021

- Built new features for customer dashboards. Work involved making sure UI components were accessible for a wide audience. Utilized HTML, LESS and an Angular inspired JavaScript framework.
- Reviewed code for other engineers. Mentored less experienced engineers and gave advice as needed.

Software Developer, OCLC - SEPT 2018 - MAY 2020

- Converted the front end of our user login application(which serves over 20,000 different libraries) from YUI to ES6/TypeScript using Material Design.
- Rewrote a user login/authentication application with React/Material UI components. React allowed us to develop code faster and Material UI gave us consistent component styles.
- Wrote new API endpoints in Java for a React/Material UI component within a legacy YUI app used by librarians for back office admin tasks.

Software Developer, Root Inc - SEPT 2015 - SEPT 2018

- Developed SPA apps with a team(also solo) in JQuery for clients. Collaborated with artists/content designers to build applications that met the client's needs.
- Rewrote custom grunt plugins to use a webpack build system for our SPA framework.
- Worked with a team of developers to make updates and add features to internal Node JS applications for our development team.

Education

Olivet Nazarene University
Bachelor's, Computer Science
2011 - 2015

Skills

HTML/CSS, JavaScript, TypeScript, React, SCSS,
Tailwind, NodeJS, SQL, GraphQL, Vitest, Vite, Design
Systems, Accessibility, Java
